Evaluation Summary Report

From Miguel García González
FINODEX Project Coordinator

FINODEX 1st open call - Phase 3

ZABALA Innovation Consulting, S.A.
Paseo Santxiki 3bis, E31182, Mutilva-Navarra, Spain

To Krunoslav Hrnjak

Dear FINODEX sub-grantee,

Your FINODEX-call1-phase 3 deliverables have been declared eligible according to the rules and conditions of FINODEX first open call for proposals.

The following considerations apply:

€40,000 are granted and will be transferred during the following days

Following the rules and conditions, the evaluation results of your proposal have been as follows:

1. Technical	Score (0,00-5,00). Threshold (3)	2,55
2. Impact	Score (0,00-5,00). Threshold (3)	3,25
Comments from Evaluator 1		
<p>Data licenses are not identified in the document and some private datasets are included as required in ESR. The project will use other geographic (from listed ones) datasets as long as it would be required by the customers but they are not present in current deployment. After asking for fiware enablers it was not identified the use of laas (maybe from the ambiguous answer) neither Data visualization nor Revenue settlement and sharing system. However, although not included in the documentation system is using CKAN. Demo with the evaluators worked properly, but demo in the deliverable is not working.</p> <p>Project has their first contract with a Croatian city. They have to achieve 4 customers this first year. Yearly turn rate (5%) seems optimistic. It is nice to have a customer reference, but not to be the only site announced for seeing a demo. Video is quite descriptive of features but focus on potential users is no so prominent. The feedback participants could not be the right group for describing the needs of the customers. Offered survey has no option for <500€ fee. EU vision is pending even being remarked in the ESR.</p>		
Comments from Evaluator 2		
<p>They are using a marginal usage of FIWARE (only one GE, apart from the FIWARE Lab Cloud). However, it is valuable they have contributed to FIWARE Lab CKAN open data repository. Open data is essential for the success of the product, but up to know only Croatia sources are integrated. Some data sets may be private, with license concerns.</p> <p>Expansion beyond local markets (Croatia, mainly) may be difficult, unless they integrate additional data set for other EU countries.</p>		
TOTAL Score (0,00-10,00). Threshold (7)	5,80	
Status	Under the thresholds for phase 4.	
Proposal over minimum score (5,00)	Yes	

Miguel García
